Subject: Remote sensing post-doc positions at FRSGC, Japan

****Please forward to potential candidates****

POST-DOCTORAL POSITIONS IN REMOTE SENSING AND ECOSYSTEM CHANGE AT FRSGC, JAPAN

Japan's Frontier Research System for Global Change (FRSGC) has positions available for post-doctoral researchers. The FRSGC Ecosystem Change Research Program invites applications from candidates with background and interests that include one or more of the following: satellite remote sensing, terrestrial ecosystem process modeling, land cover/use change, biomass burning, vegetation-climate relations, or other related research area. Successful candidates should have a Ph.D. degree before the starting date of employment.

FRSGC is a joint project conducted by the Japan Marine Science and Technology Center (JAMSTEC) and the National Space Development Agency of Japan (NASDA).

The project is designed to elucidate the various processes contributing to global change through data analysis and model experiments. FRSGC is part of an integrated three-in-one project that includes observations of Earth by satellite and ship, and the development of the "Earth Simulator". The Earth Simulator, which was completed in March 2002, is today the world's most powerful super-computer and is fully dedicated to Earth system research. FRSGC is located at the Yokohama Institute of Earth Sciences in Yokohama, Japan.

The closing date for applications is July 31, 2002. Additional information is available at:
